DETAILED ACTION

1. Applicant's amendment filed 4/17/06 has been entered. Examiner acknowledges claims 1-16 have been cancelled.

Election/Restrictions

2. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species I, claims 17-23, is a method of making a semiconductor device by using a transfer molding process.

Species II, claims 24-27, is a method of making a semiconductor device that inspects the semiconductor device.

Species III, claim 28, is a method of making a semiconductor device that seals the semiconductor device in a package by surrounding it with thermosetting resin and curing the resin.

Species IV, claims 29 and 30, is a method of making an electronic apparatus that mounts the semiconductor device on a substrate with a solder to make the electronic apparatus.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Art Unit: 2813

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

All previous species require a different search.

The following claim(s) are generic: Claims 17-23.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The semiconductor device of the instant application may be made by the use of a transfer molding process, may be inspected, cured and mounted. None of these concepts are in relation to the other in order to make a semiconductor device thus lacking unity. The device may be made by the use of one or all of the mentioned processes.
